

JACKPOT ROULETTE ®

“World’s first progressive no coin-in mystery Jackpot on roulette that attracts new players and increases tips and revenues through free prizes and more spins.”

INTRO

The use of Jackpots in Casinos is on the increase. Operators are always looking for new ways to add Jackpots to traditional games, in order to keep their client base stimulated, however Jackpot systems have been mainly restricted to Machine or Card based table game products. To add a Jackpot to Roulette has always been looked on as too complicated and the International Casino Market has had no acceptable and working solution for Roulette, until now.....

Twice-a-Company introduces The World’s First Live Game Mystery Jackpot!

This new innovation can be fitted into any Roulette Table, on any type of hardware solution and is simple to install and program. The computer graphics are second to none and will continuously update the amounts and selected prizes for the High Hit, High Pay, Loyalty points and Sponsored prizes.

JACKPOT PROGRAMS

Several Jackpots can be installed. The basic installation is two Jackpots. The High Hit is introduced as a small daily Jackpot. The High Pay will hit on a long term basis. Both Jackpots can be given away in the form of prizes and money prizes. Summarized the Jackpot programs are the following:

1. Progressive and fixed money prizes;
2. Token prizes (f.i. diamonds, dinners, cell phones, tickets, champagne);
3. Prizes for points (with the collected points, players can acquire prizes);
4. Sponsored prizes (companies supply prizes for displayed advertisements);
5. World Roulette Tournament ®;
6. Any combination of the above mentioned programs.

This is the layout of the Jackpot Roulette solution. The casino decides on which type of screen they want to display the Jackpot Roulette software. They can even supply the screen and regular computer themselves.

On 23" e-FX Screen.

On ANY type of other small – or big tft / plasma screen.

WHEN DOES THE JACKPOT HIT?

To participate in the Jackpots, players have to place their bet straight up. They win a prize when their number wins and the Jackpot hits. The patented enlightened dolly detection system will let the Jackpot hit on a by the casino determined random basis. If a Jackpot hits, the general animation will turn into a special hit-show animation; appearing on all screens.

LINKING JACKPOTS

Jackpots can be installed on single roulette tables or can be linked to more tables in order to get multiple big Jackpots. Linking table Jackpots will have a higher attraction value to single table Jackpots and will result in higher Jackpots, more new players and higher revenues.

WHO IS PAYING FOR THE JACKPOTS?

All Jackpots are FREE and will be funded by a percentage of the previous and/or predicted revenues on the roulette tables. When giving away token/natural prizes like dinner for two, concert tickets, hotel accommodations or even vacations, the Jackpot budget can be funded by the marketing department of the casino or even be supplied by the sponsors who's advertisements will be displayed on the screens throughout the casino in return. Most casinos have promotional programs for their players, and now these prizes can be awarded with the Jackpot system on Roulette whilst driving game revenues.

UNIQUENESS AND USER COMFORT

This unique system can be totally adjusted to your own business strategy due to the different Jackpot programs, the text-scroll-bar and displaying your own uploaded prizes with different hit frequencies per table. A linked Jackpot system throughout your casino can be quickly installed on any roulette table and easily managed and controlled from out of your office.

GAME ALERT for INCREASING SPINS

When the dolly is placed back on its home position, the computer will let the dealer know, after a predefined number of seconds and by means of animation and sound that the next spin has to occur. After time frame 1 the light will get orange and after time frame 2 the light will get red; then the dealer knows that he/she is too late. This feature will let you easily increase and manage the number of spins per hour.

TECHNICS

Our patented dolly uses radio signals and detection fields, which are installed underneath the table layout. Every time the dolly is picked up and moved out of the dealer's detection area and placed on the winning number in the betting detection area, the computer counts one game.

BENEFITS

- Proven cash drop increase;
- Free mystery and progressive Jackpots without coin in;
- A powerful marketing tool which can be customized to your business strategy;
- More straight up players create more spins, more tips and more profit;
- Adjustable Jackpot hit frequency which will liven up quiet areas in your casino;
- Attractive computer animations will bring slot players back to live games;
- Installation on any roulette table and any type of hardware.

FEATURES

- High Hit and High Pay money Jackpots can be turned on and off, linked to different tables with different hit-frequencies per table, displayed in any currency and made progressive per game and per second;
- The casino can use the system for their (new) loyalty points program;
